Report otherwise to driver. General Instructions. --To release the brakes for shunting purposes (the engine having left the train), first see that the hose coupling at one end of the train is off the dummy, then pull the cord which is fixed under the body of each carriage as indicated by the arrows. This admits air to the top side of the cylinder, and the brakes come off by gravity. March 1885. LONDON, TILBURY, AND SOUTHEM RAILWAY. Instructions As To Working The WestingHouse Continuous Brake. Description. Compressed air is the agent employed to apply the brake. On the engine there is a donkey pump for compressing air into a main reservoir. There is one 13 in. brake cylinder for the driving wheels, and one 8 in. for each other vehicle. A single line of pipe extends the entire length of the train. On the engine and each vehicle is a triple valve having one connexion with main pipe, and second connexion to a reservoir on each carriage, and a third connexion to the brake cylinder. The pipe from the main reservoir leads to a valve and thence to the train. This valve is operated by the driver who, by the movement of the handle in one direction, admits air to the main pipe from the main reservoir in order to charge the small reservoirs and release the brakes when they are applied, and by moving it in the...
